

# TECHNICAL DATA SHEET

## GRILAMID LV-23 ESD

### Product description

Grilamid LV-23 ESD is a 20% fibre reinforced, anti-static injection moulding grade Polyamide 12 (PA12).

Grilamid LV-23 ESD is heat stabilised, is easy to process and demould.

The inherent colour of this product is black. The main features of Grilamid LV-23 ESD are:

- Electrically conductive/ anti-static
- Heat stabilised
- High stiffness and strength
- Good chemical resistance
- Good oil resistance
- High surface quality
- Good dimensional stability
- Low density, low weight

### Application examples

Grilamid LV-23 ESD is suitable for the production of injection moulded parts in the area of electro/electronics and in the automotive industry for anti-static housings, covers and small components.

**Grilamid®**  
**EMS**

## PROPERTIES

### Mechanical Properties

		Standard	Unit	State	Grilamid LV-23 ESD
Tensile E-Modulus	1 mm/min	ISO 527	MPa	cond.	5000
Tensile strength at break	5 mm/min	ISO 527	MPa	cond.	95
Elongation at break	5 mm/min	ISO 527	%	cond.	5
Impact strength	Charpy, 23°C	ISO 179/1eU	kJ/m <sup>2</sup>	cond.	70
Impact strength	Charpy, -30°C	ISO 179/1eU	kJ/m <sup>2</sup>	cond.	40
Notched impact strength	Charpy, 23°C	ISO 179/1eA	kJ/m <sup>2</sup>	cond.	8
Notched impact strength	Charpy, -30°C	ISO 179/1eA	kJ/m <sup>2</sup>	cond.	6
Shore-D hardness		ISO 868	-	cond.	75

### Thermal Properties

Melting point	DSC	ISO 11357	°C	dry	178
Heat deflection temperature HDT/A	1.80 MPa	ISO 75	°C	dry	150
Heat deflection temperature HDT/C	8.00 MPa	ISO 75	°C	dry	80
Thermal expansion coefficient long.	23-55°C	ISO 11359	10 <sup>-4</sup> /K	dry	0.2
Thermal expansion coefficient trans.	23-55°C	ISO 11359	10 <sup>-4</sup> /K	dry	1.5
Maximum usage temperature	long term	ISO 2578	°C	dry	90 - 120
Maximum usage temperature	short term	ISO 2578	°C	dry	150

### Electrical Properties

Dielectric strength		IEC 60243-1	kV/mm	cond.	-
Comparative tracking index	CTI	IEC 60112	-	cond.	-
Specific volume resistivity		IEC 60093	Ω · m	cond.	100
Specific surface resistivity		IEC 60093	Ω	cond.	10 <sup>4</sup>

### General Properties

Density		ISO 1183	g/cm <sup>3</sup>	dry	1.19
Flammability (UL94)	0.8 mm	ISO 1210	rating	-	HB
Water absorption	23°C/sat.	ISO 62	%	-	1.0
Moisture absorption	23°C/50% r.h.	ISO 62	%	-	0.5
Linear mould shrinkage	long.	ISO 294	%	dry	0.10
Linear mould shrinkage	trans.	ISO 294	%	dry	0.70

Product-nomenclature acc. ISO 1874: PA12, MHRZ, 18-050 GF23+C

## Processing information for the injection moulding of Grilamid LV-23 ESD

This technical data sheet for Grilamid LV-23 ESD provides you with useful information on material preparation, machine requirements, tooling and processing.

### MATERIAL PREPARATION

Grilamid LV-23 ESD is delivered dry and ready for processing in sealed, air tight packaging. Predrying is not necessary.

#### Storage

Sealed, undamaged bags can be kept over a long period of time in storage facilities which are dry, protected from the influence of weather and where the bags can be protected from damage.

#### Handling and safety

Detailed information can be obtained from the "Material Safety Data Sheet" (MSDS) which can be requested with every material order.

#### Drying

Grilamid LV-23 ESD is dried and packed with a moisture content of  $\leq 0.10\%$ . Should the packaging become damaged or be left open too long, then the material must be dried. A too high moisture content can be shown by a foaming melt, excessive nozzle drool and silver streaks on the moulded part.

Drying can be done as follows:

##### Desiccant dryer

Temperature:	max. 80°C
Time:	4 - 12 hours
Dew point of the dryer:	-25°C

##### Vacuum oven

Temperature:	max. 100°C
Time:	4 - 12 hours

#### Drying time

If there is only little evidence of foaming of the melt or just slight silver streaks on the part, then the above mentioned minimal drying time will be sufficient. Material, which is stored open over days, which shows strong foaming, unusually easy flowing, streaks and rough surface on the moulding part, then the maximal drying time is required.

Silver streaks can also be caused by overheating of the material (over 350°C) or by too long melt residence time in the barrel.

#### Drying temperature

Polyamides are subjected to the affects of oxidation at temperatures above 80°C in the presence of oxygen. Temperatures above 80°C for desiccant dryers and temperatures above 100°C for vacuum ovens should be avoided.

At longer residence times (over 1 hour) hopper heating or a hopper dryer (80°C) is useful.

#### Use of regrind

Grilamid LV-23 ESD is a thermoplastic material. Hence, incomplete mouldings as well as sprues and runners can be reprocessed. The following points should be observed:

- Moisture absorption
- Grinding: Dust particles and particle size distribution
- Contamination through foreign material, dust, oil, etc.
- Level of addition to original material
- Colour variation
- Reduction of mechanical properties

When adding regrind, special care has to be taken by the moulder.

### MACHINE REQUIREMENTS

Grilamid LV-23 ESD can be processed economically and without problems on all machines suitable for polyamides.

#### Screw

Wear protected, universal screws with shut-off nozzle are recommended (3 zones).

##### Screw

Length:	18 D - 22 D
Compression ratio:	2 - 2.5

#### Shot volume

The metering stroke (less decompression distance) must be longer than the length of the non-return-valve.

##### Selecting the injection unit

$$\text{Shot volume} = 0.5 - 0.8 \times (\text{max. shot volume})$$

#### Heating

At least three separately controllable heating zones, capable of reaching cylinder temperatures up to 350°C. Separate nozzle heating is necessary. The cylinder flange temperature must be controllable (cooling).

## Nozzle

Open nozzles are simple, allow an easy melt flow and are long lasting. There is however, the danger that during retraction of the screws following injection of the melt, air maybe drawn into the barrel (decompression). For this reason, needle shut-off nozzles are often used.

## Clamping force

As a rule of thumb the clamping force can be estimated using the following formula:

### Clamping force

$$7.5 \text{ kN}^{1)} \times \text{projected area (cm}^2\text{)}$$

<sup>1)</sup> in cavity pressure of 750 bar

## TOOLING

The design of the mould tool should follow the general rules for glass fibre reinforced thermoplastics.

For the mould cavities common mould tool steel quality (e.g. hardened steel) which has been hardened to level of 56 HRC is necessary. We recommend additional wear protection in areas of high flow rates in the tool (e.g. pin point gates, hot runner nozzles).

## Demoulding / Draft angle

Parts moulded from Grilamid LV-23 ESD showing excellent dimensional stability. Asymmetric demoulding and undercuts are to be avoided. It is favourable to foresee high numbers of large ejector pins or a stripper plate. Demoulding draft angles between 1 to 5° are acceptable. Following values can be considered:

(VDI 3400)	12	15	18	21	24	27
Depth of roughness (µm)	0.4	0.6	0.8	1.1	1.6	2.2
Demoulding angle (°)	1	1	1.1	1.2	1.3	1.5

(VDI 3400)	30	33	36	39	42	45
Depth of roughness (µm)	3.2	4.5	6.3	9	13	18
Demoulding angle (°)	1.8	2	2.5	3	4	5

## Gate and runner

To achieve an optimal mould-fill and to avoid sink marks, a central gate at the thickest section of the moulding is recommended. Pin point gate (direct) or tunnel gates are more economical and more common with technical moulding.

To avoid premature solidification of the melt and difficult mould filling, the following points should be considered:

### Gate diameter

0.8 x thickest wall section of the injection moulding part

### Runner diameter

1.4 x thickest wall section of the injection moulding part (but minimum 4 mm)

## VENTING

In order to prevent burning marks and improve weldline strength, proper venting of the mould cavity should be provided (venting channels on the parting surface dimensions: Depth 0.02 mm, width 2 - 5 mm).

## PROCESSING

### Mould filling, post pressure and dosing

The best surface finish and a high weld line strength are achieved when a high injection speed and a sufficiently long post pressure time are employed.

The injection speed should be regulated so as to reduce towards the end of the filling cycle in order to avoid burning. For dosing at low screw revolutions and pressure the cooling time should be fully utilised.

### Basic machine settings

In order to start up the machine for processing Grilamid LV-23 ESD, the following basic settings are recommended:

### Temperatures

Flange	80°C
Zone 1	260°C
Zone 2	265°C
Zone 3	270°C
Nozzle	265°C
Tool	80°C
Melt	260°C

### Pressures / Speeds

Injection speed	medium - high
Hold-on pressure (spec.)	300 - 800 bar
Dynamic pressure (hydr.)	5 - 15 bar
Screw speed	50 - 100 min <sup>-1</sup>

## **CUSTOMER SERVICES**

EMS-GRIVORY is a specialist in polyamide synthesis and the processing of these materials. Our customer services are not only concerned with the manufacturing and supply of engineering thermoplastics but also provide full technical support including:

- Rheological design calculation / FEA
- Prototype tooling
- Material selection
- Processing support
- Mould and component design

We are happy to advise you. Simply call one of our sales offices.

The recommendations and data given are based on our experience to date, however, no liability can be assumed in connection with their usage and processing.
